

B.Sc. PCM (Physics)**SEMESTER-III**

17UPHCC05	Core:5 Mathematical and Solid State Physics	4 hours/week	Credits:4
------------------	--	---------------------	------------------

UNIT I: *Vectors* (12 Hr)

- Introduction to Vector and vector algebra
- Vectors transform
- Gradient
- The operator Del (∇)
- The Divergence
- The Curl and their significance
- Fundamental theorem for Gradient for Divergences and Curls
- Relations between fundamental theorems

UNIT II: *Fourier analysis* (09 Hr)

- Introduction
- Definition and derivation of the coefficients of Fourier Series
- Exponential form of Fourier series and evaluation of its constants
- Odd and Even series
- Parseval's equation and Fourier integral
- Application of Fourier integral as wave packet and derivation of uncertainty principle
- Applications of Fourier analysis

UNIT III: *Solid state* (10 Hr)

- Introduction
- Forces between atoms
- Bonding energy
- Bonding in solids
- Ionic bonds and Ionic crystals
- Properties of Ionic Solids
- Covalent bonds , Covalent crystals and its properties
- Metallic bond
- Molecular bond : Hydrogen and Vander walls Bond
- Comparison between various bonds

- Electron drift in electric field
- Classical Free electron theory of metal
- Band theory of metals and classification of conductors , Insulator and semiconductor

UNIT IV: *Crystallography*

(10 Hr)

- Introduction
- Concept of lattice , Primitive and unit cell
- Bravais lattice in three dimension
- Seven crystal system
- Miller indices of cubic planner and directions
- Elementary crystal system (NaCl , ZNS and Diamond)
- Hexagonal packed structure

UNIT V: *X - Rays*

(12 Hr)

- Origin of X - Ray
- Properties of X – Ray
- X – Ray Spectra
- Coolidge tube method
- Intensity measurement technique
- Laues Spots
- Bragg’s law and Bragg spectrometer
- Application of X - Ray

Text Book:

- Mathematical Physics by B.S. Rajput
- Solid state Physics by C. Kittel

Reference Books:

- Mathematical Physics by Jyoti Kumar
- Introduction to Modern Solid State Physics by Yuri M. Galperin

17UPHCC06	Core:6 Physics Practical 3	5 hours/week	Credits:3
------------------	---------------------------------------	---------------------	------------------

- Exp.1. Determination of crystal structure by X – Ray film
- Exp.2. Young Modulus by bending.
- Exp.3. Energy band gap by thermister
- Exp.4. M.I of a Flywheel
- Exp.5. Fourier analysis of given wave form
- Exp.6. Determination of temperature coefficient of resistivity of given semiconductor.
- Exp.7. Fabrication – I: Zener diode as voltage regulator
- Exp.8. Fabrication - II: Full wave rectifier
- Exp.9. To determine thermal conductivity of given bad conductor
- Exp.10. Detraction grating

B.Sc. PCM (Physics)

SEMESTER-IV

17UPHCC07	Electro and Magneto static & Electronics	4 hours/week	Credits:4
-----------	---	--------------	-----------

UNIT I: *Electrostatic* (10 Hr)

- Introduction
- Coulombs law ,Electric Field
- Continuous charge distribution
- Field lines and flux
- Divergence of electric field and Gauss law
- Curl of Electric filed
- Electrical Potential
- Poisson and Laplace equation
- Potential of point charge distribution
- Work and energy in electrostatic
- Energy of continuous charge distribution

UNIT II: *Magneto static* (8 Hr)

- Introduction
- Magnetic field
- Magnetic forces
- Currents
- Biot-Savart's law
- Divergence and curl of magnetic field
- Comparison between magneto static and electro static
- Magnetic vector potential

UNIT III: *Transistor (BJT)* (12 Hr)

- Introduction
- Current flows in transistors
- Transistor circuit configuration
- Current amplification factor
- Leakage current
- Comparison between three configuration
- Why CE amplifier is preferred?
- **CE Amplifier:**
 - Characteristic of CE transistor
 - Cut off , active and saturation region
 - Amplification action
 - Phase relation between input and output

- D.C. and A.C. Load Line.
- Limit of operation

UNIT IV: *Transistor Biasing*

(12 Hr)

- Operating point
- Single stage transistor amplifier
- Multi stage transistor amplifier explanation with block diagram
- Biased stabilization and its requirement
- Stability factor
- Method of transistor biasing (Fix biases , Collector to base bias , Emitter Biased and Voltage divider Biased and analysis)

UNIT V: *Field effect transistor*

(10 Hr)

- Introduction
- Types of FET
- Junction field effect transistor
- Working principle of JFET
- Schematic symbol of JFET
- Importance of JFET
- Difference between BJT and JFET
- JFET characteristics
- Parameters of JFET
- JFET single stage amplifier
- Advantages of JFET
- Introduction to MOSFET and its working
- Type of MOSFET
- Current flow in MOSFET

Text Books:

- Basic electronics by Malvino
- Properties of Matter by R Murugesan

Reference Books:

- N N Bhargav and Kushreshtha ,Basic Electronics and Linear Circuits
- Allen Mottershead, Electronic Device and Circuits
- D.S. Mathur, S. Chand Publications, Elements Of Properties Of Matter
- C.Kittel , Introduction to Solid State Physics

17UPHCC08	Core:8 Physics Practical 4	5 hours/week	Credits: 3
------------------	---------------------------------------	---------------------	-------------------

- Exp.1. CE Transistor characteristics and parameters
- Exp.2. CE Transistor characteristics and D.C. Load Line and Q - Point
- Exp.3. Deflection magnetometer
- Exp.4. Magnetic field of solenoid
- Exp.5. FET characteristics
- Exp.6. FET as a voltmeter
- Exp.7. Parameters of FET
- Exp.8. Fabrication of regulated power supply using 3 – Pin regulation
and its Load Characteristics
- Exp.9. Fabrication of Zener regulated power supply and its Load Characteristics

B.Sc. PCM (Physics)

SEMESTER-V

17UPHCC09	C.M & Q.M	4 hours/week	Credits:4
-----------	-----------	--------------	-----------

Classical Mechanics

UNIT I: *Lagrangian Formulation* (16 Hr)

- Constraints
- Generalized coordinates
- D'Alembert's principle
- Lagrange' equations
- A general expression for kinetic energy
- Symmetries and laws of conservation
- Cyclic or ignorable coordinates
- Velocity-dependent potential of electromagnetic field
- Rayleigh's dissipation function
- Problems

UNIT II: *Variational Principle:* (16 Hr)

- Lagrange's and Hamilton's Equations Configuration space,
- Hamilton's principle
- Equivalence of Lagrange's and Newton's equations
- Advantages of the Lagrangian formulation-electro-mechanical analogies
- Lagrange's undetermined multipliers
- Applications of the Lagrangian method of undetermined multipliers
- Hamilton's equations of motion
- Some applications of the Hamiltonian formulation
- Phase space
- Problems.

Text Books for Unit I & II:

- Introduction to Classical Mechanics by Takwale and Puranik.
- Classical mechanics by Griffith.

Quantum Mechanics

UNIT III: *The Schrodinger equation and Stationary States Schrodinger equation* (13 Hr)

- A Free Particle In One Dimension
- Generalization To Three Dimensions
- The Operator Correspondence And The Schrodinger Equation For A Particle Subject , Normalization And ψ To Forces
- Physical Interpretation On Probability Interpretation
- Non-Normalizable Wave Functions And Box Normalization
- Conservation Of Probability
- Expectation Values, Ehrenfest's Theorem
- Admissibility Conditions On The Wave Function,
- Stationary States: The Time Independent Schrodinger Equation
- A Particle In A Square Well Potential, Bound States In A Square Well(E0)

UNIT IV: *General Formalism of Wave Mechanics Schrodinger Equation and the Probability* (13 Hr)

- Interpretation for an N Particle System
- The Fundamental Postulates of Wave Mechanics: (a) Representation of States
(b) Representation of Dynamical Variables
- The Adjoint of an Operator, and Self Adjointness
- The Eigen value Problem; Degeneracy
- Eigen values and Eigen functions of Self-Adjoint Operators
- The Dirac-Delta function

Text Books for Unit III & IV:

- Text Book of Quantum Mechanics by Mathews and Venkateshan
- Quantum Mechanics: Theory and Applications by A. K. Ghatak & Loknathan

Reference Books:

- Mathematical Physics - P.K.Chattopadhyay
- Mathematical methods in Physical Science - M.L.Bose, John Willy & Sons
- Classical Mechanics - Gupta, Kumar and Sharma. Pragati Prakashan, Meerut, India
- Classical Mechanics - Goldstein
- Quantum Mechanics - Ghatak and Loknathan, Macmillan India Ltd., Delhi
- Quantum Mechanics - Ajoy Ghatak
- Elements of Quantum Mechanics - Kamal Singh and S.P.Singh, S.Chand Co.

17UPHCC10	Self study (Recent trends in physics)	1 hours/week	Credits:4
------------------	--	---------------------	------------------

Different topics on recent trends in physics will be assigned to students (On individual base or in group)

17UPHDC01	Optics , statistical Mechanics , Spectroscopy	4 hours/week	Credits:4
------------------	--	---------------------	------------------

17UPHDC02	Solid State Physics	4 hours/week	Credits:4
------------------	----------------------------	---------------------	------------------

17UPHCC 11	CBT		Credits:2
-------------------	------------	--	------------------

17UPHCC 12	Practical (C.M. & Q.M.)	9 hours/week	Credits:3
-------------------	------------------------------------	---------------------	------------------

17UPHDC03	Practical	6 hours/week	Credits:2
------------------	------------------	---------------------	------------------

17UPHDC04	Practical	6 hours/week	Credits:2
------------------	------------------	---------------------	------------------

B.Sc. PCM (Physics)

SEMESTER-VI

17UPHCC13	Electrodynamics and Nuclear Physics	4 hours/week	Credits:4
-----------	--	---------------------	------------------

17UPHDC05	Electronics	4 hours/week	Credits:4
-----------	--------------------	---------------------	------------------

17UPHDC06	Electronics and Communication	4 hours/week	Credits:4
-----------	--	---------------------	------------------

17UPHCC14	Practical Electrodynamics and Nuclear Physics	9 hours/week	Credits:4
-----------	--	---------------------	------------------

17UPHDC07	Practical Electronics	5 hours/week	Credits:2
-----------	----------------------------------	---------------------	------------------

17UPHDC08	Practical Electronics and Communication	5 hours/week	Credits:2
-----------	--	---------------------	------------------

17UPHCC15	Project/Internship/Training	6 hours/week	Credits:2
-----------	------------------------------------	---------------------	------------------
